- Tailwind
- ReactJs
- FireBase
- Sass
- NodeJs
- MySQL

EDUCATION

- **Intermediatie Pass Out**
  Aster Public School, Uttar Pradesh
- **Currently Studying At**
  Gautam Buddha University, Uttar Pradesh

PROJECTS

Planit.io — Sep 2022 - Oct 2023

ReactJs, Tailwind CSS, Firebase, NodeJS

This webapp was created for a ineuron hackathon 2022, it was a meeting scheduler app which can be used to schedule or join the meetings with any of the user. I worked on the frontend of the webapp along with the other team members.

- Schedule meetings with someone.
- Authentication using firebase.

Drone Console — july 2022

HTML , CSS , JavaScript and Jquery

i created the Ui for the backend they already had, the purpose of this web app was inorder to ensure proper functioning of the drones of the organization. It also showed the data like altitude, yaw , speed of drones in the console with a map to display the location and a heads up display simulating the movement of the drones.

- Easy to use with clean UI.
- Control Drones.

Frienducation Site — December 2022 - March 2023

React, NextJs, Sass, Google Firebase

I created this cool looking Website for a hackathon organized by Techno Cultural Club of my university. It was used as a website to deliver all the info related to the hackathon in a cool and fresh way through cool UI design.

- Easy to use with clean UI
- Cool CSS items on the website.

Zeus Tech

Html, Css, Python, Flask

This is an AI powered application which allows us to convert the .tif images clicked by the drone and convert them into thermal images which can be used to determine various factors like health of the crops in a huge field.

- Used flask library to communicate with the frontend and send/recieve data from the AI model
- Easy to use with just few clicks experience.

EXPERIENCE

OmniPresent Robot Tech
One Month Internship

Learned alot of new stuff while working as a frontend developer here. I was a part of a team of four named GCS i,e, Ground Control System. Our work was to create a web console for the proper functioning tracking of the drones.

- Tech used: HTML, CSS, JavaScript, Jquery and LeafletJS
- HTML Canvas used for simuating the movement of the drones.

Frienducation
3 Months Internship

Developing the official site of Frienducation, working as a frontend web developer. Main role in this internship is to add features to the site while maintaining a clean looking UI

- Tech used: React, Sass
- Using react and sass to create a responsive site for the organization
